Authorization Key

Access ID/Client ID: `ljalsjdfjlkahlkdfjlkdsdjfj`
Access Secret/Client Secret: `*****`

Cloud Authorization IP Allowlist

To improve security, you can set up a list of IPs that can legally access Tuya's data centers through the IP whitelist function. Requests from source IPs that are not in this list will be rejected.

SaaS Development Framework

We recommend that you quickly build IoT solutions based on Tuya's open-source SaaS Development Framework.

Select Control Instruction Mode

This configuration will affect the control instruction mode of the specified product under this project. Before you change the mode, refer to the following table of instructions and check the instructions applicable to this product in the two modes respectively.

Select DP Instruction

DP Instruction

Control devices with original DP instructions. You can access any DP information.

Standard Instruction

Control devices with standard instructions after mapping. Various devices across manufacturers can be controlled with a single set of instructions, but note that some functions might not be compatible.

Table of Instructions

DP Instruction		Standard Instruction
switch_1	→	switch_1

Are you sure to change the control instruction mode to the raw DP mode?

After you save the configuration, the devices under this project might not be able to be controlled by the original standard instructions. Refer to the DP instructions for re-adaptation.
